Technical Skills

- Programming: C++/C#/Java (11 years), HTML & CSS (9 years), Python (9 years), TypeScript/JavaScript (3 years)
- Software & Tools: Git and GitLab/Hub, Claude Code, Visual Studio, VS Code, GitLab CI/CD, Docker, Jira, Confluence
- General: Data Structures and Algorithms, Database Systems, Artificial Intelligence, Machine Learning, Operating Systems

Experience

Lockheed Martin

Software Engineering Leadership Development Program - THAAD

Orlando, FL (October 2025 - Current)

- Part of highly selective rotational leadership development program for high-performing early-career engineers
- Initiate and lead digital transformation efforts by designing and implementing a docs-as-code process as part of Lockheed Martin's Terminal High Altitude Area Defense (THAAD) program, including securing and managing \$40k in funding
- Collaborate with MDA customer and internal stakeholders to drive process improvements and implement change management solutions that have impacts program-wide
- Write Python scripts to automatically sync docs-as-code Markdown content with Confluence pages via REST API
- Create, configure, and deploy CI/CD pipeline using GitLab CI/CD and Docker

Software Engineer II - THAAD

Huntsville, AL (November 2023 - October 2025)

- Designed, implemented, and maintained embedded software for THAAD component simulation using C++ and Python
- Executed four software releases, ensuring all requirements were met, including one as primary Responsible Test Engineer
- Created repeatable system drive build process, saving the program over \$50k in costs per drive failure by dramatically reducing simulation system and production line downtime
- Organized and moderated 20+ group peer reviews with internal and external stakeholders for code and documentation
- Conducted 10+ interviews for Software Engineer candidates and mentored new hires after onboarding

Epic Systems

Software Developer

Madison, WI (July 2021 - November 2022)

- Performed full-stack object-oriented programming using C# .NET, React, and JavaScript/TypeScript to create fast, scalable, and maintainable software to handle appointment scheduling for over 50% of medical patients in the US
- Rewrote two customer-facing activity screens to increase appointment scheduling efficiency as well as improve long-term maintainability of the code using unit testing with continuous integration
- Performed 100+ peer code reviews for fellow developers to improve quality of updates and ensure production-ready code
- Collaborated in an Agile environment alongside other roles such as UX designers, system implementation, technical support, and quality assurance testers to ensure consistency and reliability in software

UC San Diego School of Medicine

Intern - Division of Biomedical Informatics

San Diego, CA (June 2019 - March 2020)

- Co-authored a research publication in JAMIA Open and presented findings at UCSD DBMI Summer Internship Symposium
- Replaced the UCSD DBMI's outdated email system with a proof-of-concept database using Solidity smart contracts deployed to the Ethereum blockchain to create a transparent, immutable, and efficient process
- Created an easily accessible web app using Java and Spring Boot to allow users to upload their certifications to the database as well as query other users' certifications for verification purposes
- Automated performance testing of database by writing and running bash scripts on AWS virtual machines with Ubuntu Linux, leading to performance improvements that reduced time taken to only 21% of the original version

Education

University of California, Santa Barbara (UCSB)

Graduated: June 2021

Bachelor of Science: Computer Science (GPA: 3.41)
